等效极限使用环境温度（ATB），请咨询应用工程部门。
The indicated value is based on the AOT value of N/A°C for an engine tested at 100% of the ESP Power, reflecting temperature in an open condition, without an enclosure or container, without any airflow obstruction in the front of the radiator, without air recirculation, with free exhaust gas exit and with the engine thermostatic valve in its full open condition, without a closing plate present. The reference air restriction is equal to 50Pa. For the equivalent ATB (Air-to-Boil) performance on a customer or project basis, please consult Weichai Application Engineering.

² 仅针对发动机的频率响应特性 This refers only to the frequency response of the engine.

³ 对于应急备用用途或者要求发动机快速启动并加载的用途，必须安装冷却液加热器，安装指导详见发动机随机《使用保养说明书》，推荐安装加热器时，应确保冷却液在所有发动机部件间持续循环，对于V型发动机，需要确保两侧均可被加热。
Engines used in emergency standby application or applications that require immediate start, they must be equipped with coolant heaters and pre-lubricated system, details guidance reference the <Operation and Maintenance Manual for Diesel Engine> which documents attached to engine. Weichai recommend heaters installation to be executed by providing constant coolant circulation across all the related components. For V-type engines, it is necessary to ensure that both sides are heated simultaneously.

功率定义 Ratings definitions

数据中心功率 Data Centre Power (DCP)

在无限制运行时间的条件下，发电机组能为可变或连续电力负载提供的最大功率。Data Centre Power (DCP) is the maximum power that can be delivered while supplying a variable or continuous electrical load. A DCP-rated engine may operate for an unlimited number of hours per year.

* 注意 Note: 发动机驱动的交流发电机组是数据中心的可靠备用电源，不应在持续加载时与市电并网。The engine driven alternating current generating set is a reliable source of power for data centers and it can also be used to back up a reliable utility. Prolonged operation at load in parallel with a utility is not permitted.

备用功率 Emergency Standby Power (ESP)

在商定的运行条件下并按制造商规定的维修间隔和方法实施维护保养，当公共电网出现故障或在试验条件下，发电机组每年运行达200小时的某一可变功率系列中的最大功率，在24小时的运行周期内允许的平均输出功率应不大于ESP的70%。Emergency Standby Power (ESP) is the maximum power that can be delivered in the event of a utility power outage while supplying a variable electrical load. An ESP-rated engine may operate for up to 200 hours per year. The permissible average power output over 24 hours of operation shall not exceed 70% of the ESP. No overload capability is allowed. The engine is not to be used for sustained utility paralleling applications.
